Health And Health Care Utilization

Health Care Utilization refers to the use of health care services. People use health care for many reasons including preventing and curing health problems, promoting maintenance of health and well-being, or obtaining information about their health status and prognosis.

Utilization is often reported in a variety of different methods: 1.

Objectives: We aimed to determine whether loneliness is associated with higher health care utilization among older adults in the United States. Methods: We used panel data from the Health and Retirement Study (2008 and 2012) to examine the long-term impact of loneliness on health care use. The sample was limited to community-dwelling persons in the United States aged 60 years and older.
