Lyme disease, also known as Lyme borreliosis, is an infectious disease caused by the *Borrelia* bacterium which is spread by ticks. The most common sign of infection is an expanding red rash, known as erythema migrans, that appears at the site of the tick bite about a week after it occurred. The rash is typically neither itchy nor painful. Approximately 70-80% of infected people develop a rash.

~~ALDF~~ — ~~Lyme Disease~~

Lyme disease is most common in the northeastern and upper mid-western United States. More than 90% of cases have been reported in nine states: Connecticut, Maryland, Massachusetts, Minnesota, New Jersey, New York, Pennsylvania, Rhode Island and Wisconsin. Even within states, there are regions of high risk and others with very low rates of disease.
